
**OWNER'S (OPERATOR'S) MANUAL AND
SAFETY INSTRUCTIONS
FOR KITO MOTORIZED CRANES
N6 SERIES**

ALWAYS SAVE THIS BOOK FOR FUTURE REFERENCE.

KITO

Thank you for purchasing the KITO N6 series Motorized Crane.

This crane uses a motorized end carriage that combines a light weight frame with a geared motor. It travels quietly and smoothly, and is designed to raise work efficiency in the customer's place.

Owing to thorough quality controls, this crane has been manufactured to satisfy requirements for durability.

However, improper handling, usage or maintenance may result in unforeseen accident or injury. Therefore, read thoroughly this manual before using the equipment.

12. Parts list	28

1. DEFINITIONS

⚠ DANGER : indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING : indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION : indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

WLL : indicates maximum mass (working load limit) which a crane is designed to support in general service.
Under WLL, all values are indicated in t (ton).

2. INTENDED PURPOSE

This crane has been designed for vertically lifting, lowering and horizontally carrying loads by means of the pendant push button switches, under normal atmospheric conditions of the work place.

3. BEFORE USE

3.1 Safety summary

Danger exists when heavy loads are transported, particularly when the equipment is not being used properly or is poorly maintained. Because accidents and serious injury could result, special safety precautions apply to the operation, maintenance and inspection of the KITO crane.

⚠ WARNING : **ALWAYS operate, inspect and maintain this Crane in accordance with applicable safety codes and regulations.**

Following these simple rules can help to avoid hoisting accidents;

⚠ WARNING : **IMPROPER crane use could result in death or serious injury. To avoid these hazards :**

3.1.1 Before and during operation

- NEVER** lift or transport loads over or near people.
- NEVER** use a crane for lifting, supporting or transporting people.
- NEVER** leave a suspended load unattended.
- NEVER** lift more than the rated capacity.
- NEVER** reverse crane operation abruptly or inch the crane excessively in travel.
- NEVER** pull a load from an extreme angle.
- NEVER** allow the crane to impact the stopper or other cranes.

- ALWAYS** inspect the crane before use and at periodic intervals.
- ALWAYS** pay attention to load swing while operating the crane.
- ALWAYS** be aware of what is going on in the vicinity of the crane during use.
- ALWAYS** keep travel and traverse paths, and shelters, unobstructed.
- ALWAYS** operate the push buttons from a location from where both the hook and load can be seen.
- ALWAYS** check slings and loads are properly installed before use.
- ALWAYS** walk behind or alongside a suspended load, and keep eyes looking forward, while operating the crane.
- ALWAYS** read the "Safety Instructions" for your hoist and trolley respectively provided. — — — — —

3.1.2 Maintenance and checks

- ALWAYS** have maintenance, check and repairs performed by a qualified person.
- ALWAYS** place an "OUT OF SERVICE" sign on the crane when performing maintenance, checks or repairs.
- ALWAYS** turn OFF power to the hoist, trolley and crane before performing maintenance, checks or repairs.
- ALWAYS** wear a helmet and safety belt when performing maintenance, checks or repairs.

4. Cranes

4.1 Features

[Geared motor]

- (a) Employs an electromagnetic brake to mechanically adjust brake torque in stopping.
- (b) Travel is kept quiet because of the helical gear used in the reduction gear.
- (c) Comes in 3 models with different single speed specification (low, standard and high) and 1 model with dual speed specification (Reduction ratio of 4:1).

[Low-head end carriage]

- (a) Track wheels are easily taken off. This greatly shortens installation and maintenance work.
- (b) High tension bolts (H.T.B.) are used to couple the end carriage to the girder as standard for low-head type.
- (c) The center punch for girder installation holes is marked on the end carriage to make centering easier.
- (d) The end carriage is coated with a red primer when shipped from the factory.
- (e) Track wheels are made of carbon steel to improve durability.
- (f) The end carriage uses press formed frame designed by Kito.

[Overhead end carriage]

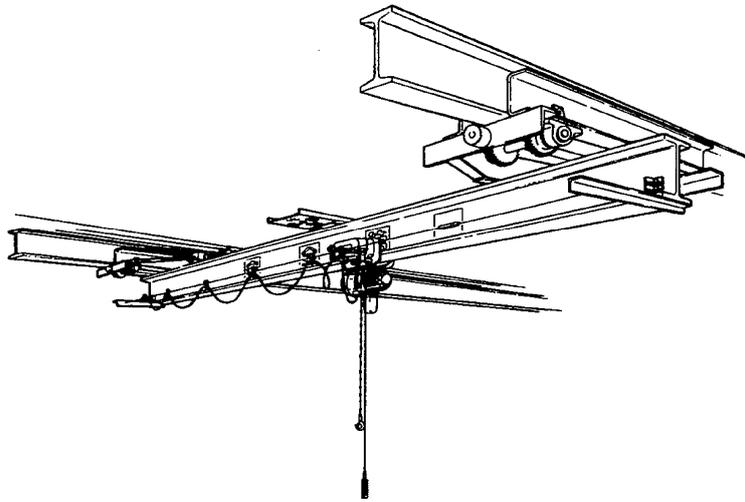

- (a) The end carriage has an open frame construction to facilitate track wheel maintenance.
- (b) The end carriage is built with side rollers to keep travel smooth and stable.
- (c) The center punch for girder installation holes, girders and travel rails are marked on the end carriage to make centering easier.
- (d) Span is easily adjusted on-site because the end carriage is coupled to the frame by bolts.
- (e) The end carriage is coated with a red primer when shipped from the factory.
- (f) Track wheels are made of carbon steel to improve durability.
- (g) The end carriage uses press formed parts designed by Kito.

[Double girder end carriage]

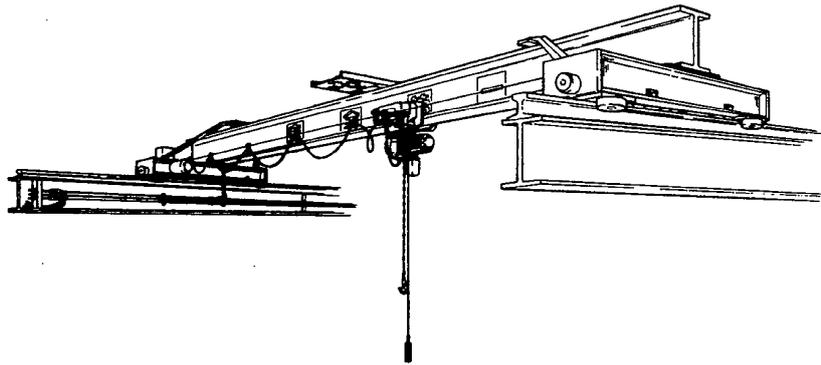

- (a) The end carriage has an open frame construction to facilitate track wheel maintenance.
- (b) The end carriage is built with side rollers to keep travel smooth and stable.
- (c) The center punch for girders and travel rails are marked on the end carriage to make centering easier.
- (d) The end carriage uses press formed frames (channel type) designed by Kito.
Girders and catwalks are easily installed.
- (e) The end carriage is coated with a red primer when shipped from the factory.
- (f) Track wheels are made of carbon steel to improve durability.

General view (For your reference)

※1 : Dimensions for standard speed geared motor
 ※1 : show dimensions in case of standard speed (20/24m/min.) geared motor.
 ※2 : show height from the upper surface of the traveling rail to the girder coupling.
 • WLL : Working Load Limit (t).
 • Figures in parentheses are for high (30/36 m/min.) speed type.

5. Assembly, wiring and test run

⚠ WARNING : ALWAYS make sure that the load supporting structures and load attaching device are strong enough to hold the weight of load and hoist.

Have all assembly works by the authorized people. Off-limits to unauthorized people in assembly works area.

5.1 Assembly

For detailed assembly instructions, refer to the motorized crane's assembly manual. The end carriage can be easily set on the travel rails with the following procedure.

[Low-head type end carriage]

(a) Detach all track wheels and axles from the end carriage as shown in Fig. 1.

The end carriage frame can be erected without detaching it from the girder. Reassemble the track wheels and axles when the end carriage is in position.

When installing track wheel onto frame fasten bolt ① with a torque tabulated below.

Bolt ① size	M8	M10
Fastening torque (kg-cm)	84 to 93	167 to 184

There is always the risk of the hoist and trolley moving when installing, therefore it is easy to fix them to the girder. Also, pay attention when assembling with the power supply cable, junction cable and other accessories.

(b) Installing as shown in Fig. 1

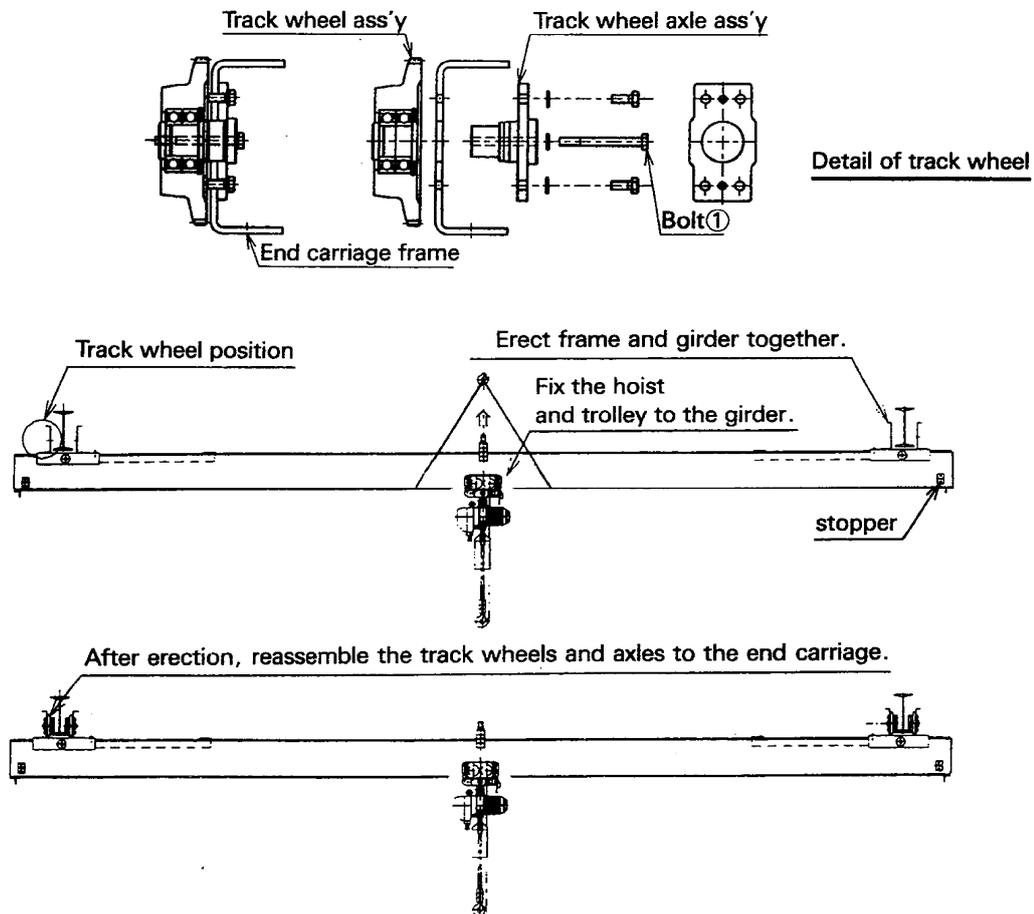

Fig. 1

(c) Precautions in installation (Refer to Fig. 2)

Pay attention to the following points when coupling the end carriage to the girder on-site.

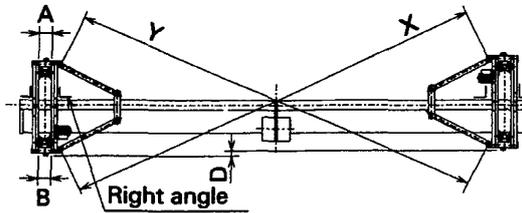

Fig. 2

- Keep the end carriage frames parallel (A and B should be the same).
- Minimize any discrepancy between the left and right end carriage frames position (D should be minimized).

⚠ WARNING : If improperly assembled and installed, the crane will repeatedly strike the stopper on the travel rail. This may cause bolts to loosen or other trouble.

- Keep the end carriage at a right angle to the girder.
- Minimize any discrepancy in angling between the left and right end carriage frames (X and Y dimensions).

⚠ WARNING : When installing the hoist and trolley on the girder, refer to the "Safety Instructions" for your hoist and trolley respectively provided.

[Overhead type crane]

- (a) Generally, the simple way to erect the completed crane is shown in Fig. 3. Lift the crane into position of following figure, then turn the crane so as to fit on the travel rails.

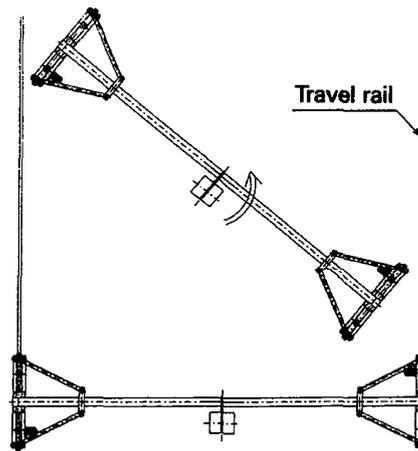

Fig. 3

(b) Precautions in installation (Refer to Fig. 4).

The end carriage comes set at a right angle to the girder and squared to size when delivered, nevertheless, pay attention to the following points when coupling the end carriage to the girder on-site.

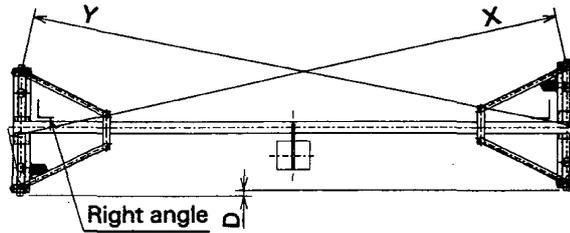

Fig. 4

- Minimize any discrepancy between the left and right end carriage frames position (D should be minimized).

⚠ WARNING : If improperly assembled and installed, the crane will repeatedly strike the stopper on the travel rail. This may cause bolts to loosen or other trouble.

- Keep the end carriage at a right angle to the girder.
- Minimize any discrepancy in angling between the left and right end carriage frames (X and Y dimensions).

⚠ WARNING : When installing the hoist and trolley on the girder, refer to the "Safety Instructions" for your hoist and trolley respectively provided.

[Double girder crane]

Many double girder cranes come equipped with peripheral equipment and accessories, and there are equally as many different ways to erect them.

- If the crane can be erected with the left and right end carriage frames attached to the girder, then erect the crane according to the same procedure described for overhead cranes, check dimensions after erecting the equipment, and adjust where necessary.
- If the crane cannot be erected with the left and right end carriage frames attached to the girder, then first erect the end carriage frames on the travel rails as shown in Fig. 5. Next, turn the girders so as to fit between the travel rails and lift into position, and attach the girders to the end carriage frames on the travel rail. When assembling, set the end carriages to a right angle with the girder and square with one another, and adjust span as necessary (Refer to Fig. 5).

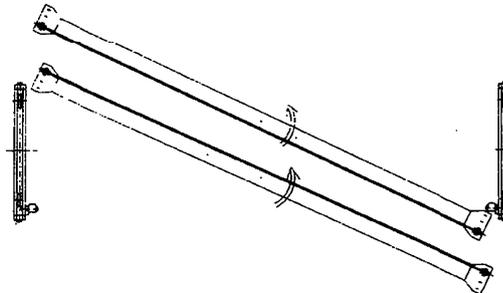

Fig. 5

(c) Precautions in installation (Refer to Fig. 6)

Pay attention to the following points when coupling the end carriage to the girder on-site.

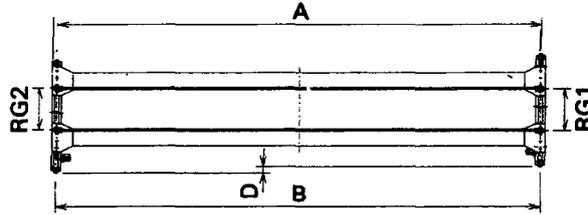

Fig. 6

- Minimize any discrepancy between the left and right end carriage frames position (D should be minimized). If improperly assembled and installed, the crane will repeatedly strike the stopper on the travel rail. This may cause bolts to loosen or other trouble.
- Minimize any discrepancy in rail gauge between the traverse rails (RG1 and RG2 dimensions).
- Keep the end carriage frames parallel (A and B should be the same).

5.2 Wiring

⚠ DANGER : ALWAYS turn off power source or breaker switch to prevent electric shock before beginning the wiring process.

HAVE all wiring performed by an authorized electrician.

Power can be supplied by the cable power supply, tro-reel, high tro-reel or trolley duct systems. For wiring from the power source to the crane's control box, refer to "9. Power supply" in this manual.

5.2.1 Control box internal wiring

Control box wiring differs depending on whether the emergency stop device (option) to the push button switch is attached or not, and whether an electric chain hoist or rope hoist is used. Check wiring diagrams before wiring.

For your reference, typical wiring schemes are shown in Figs. 7 through 12.

5.2.1 Electric traversing wire rope hoist with motorized trolley single speed (end carriage), without emergency stop device.

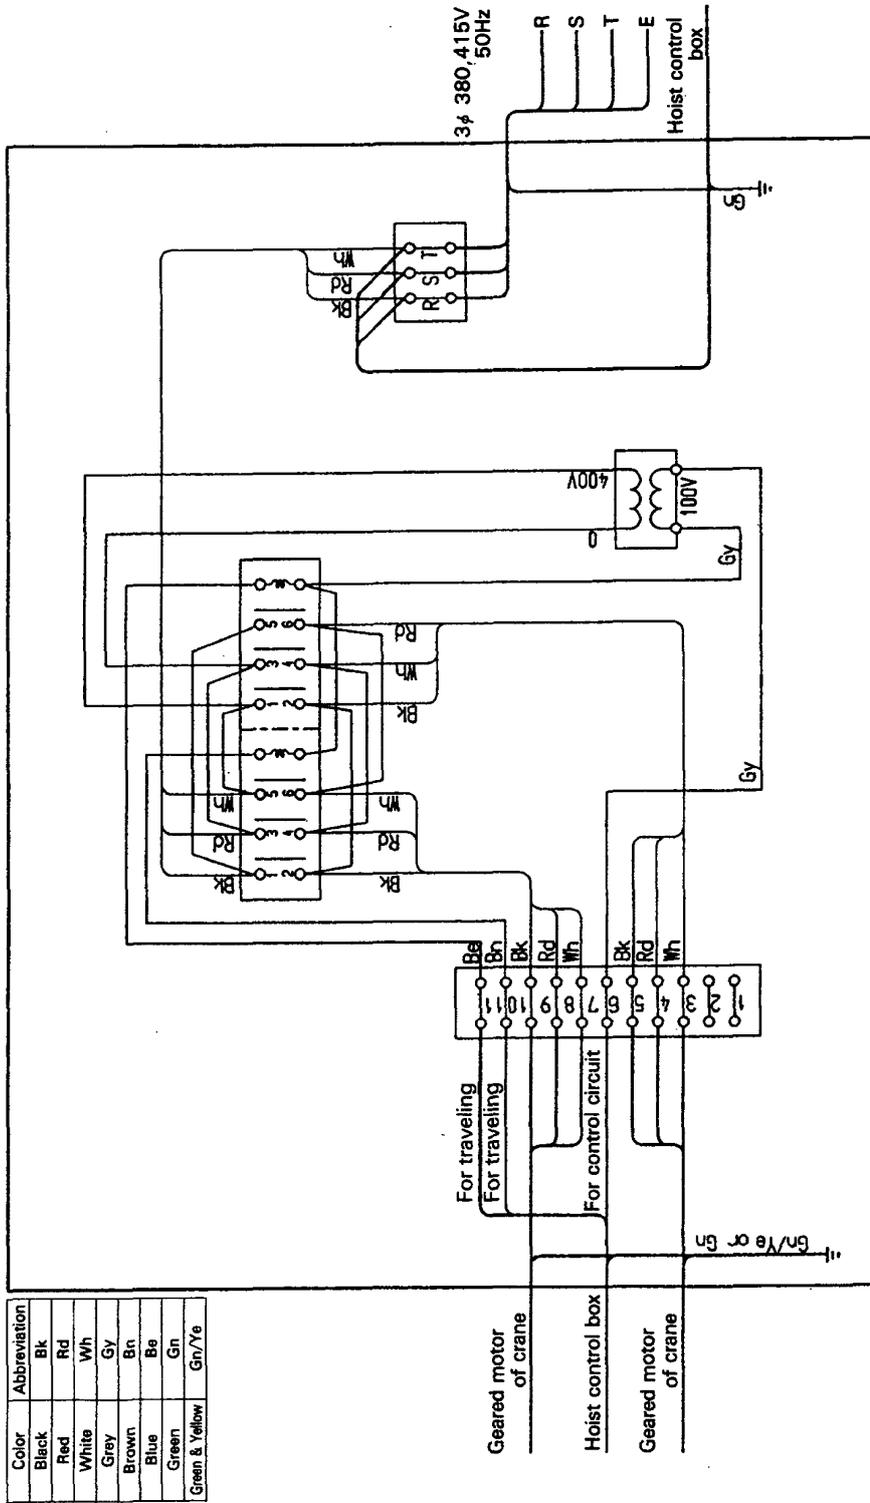

Fig. 7

5.2.1 Electric traversing wire rope hoist with motorized trolley single speed (end carriage), with emergency stop device.

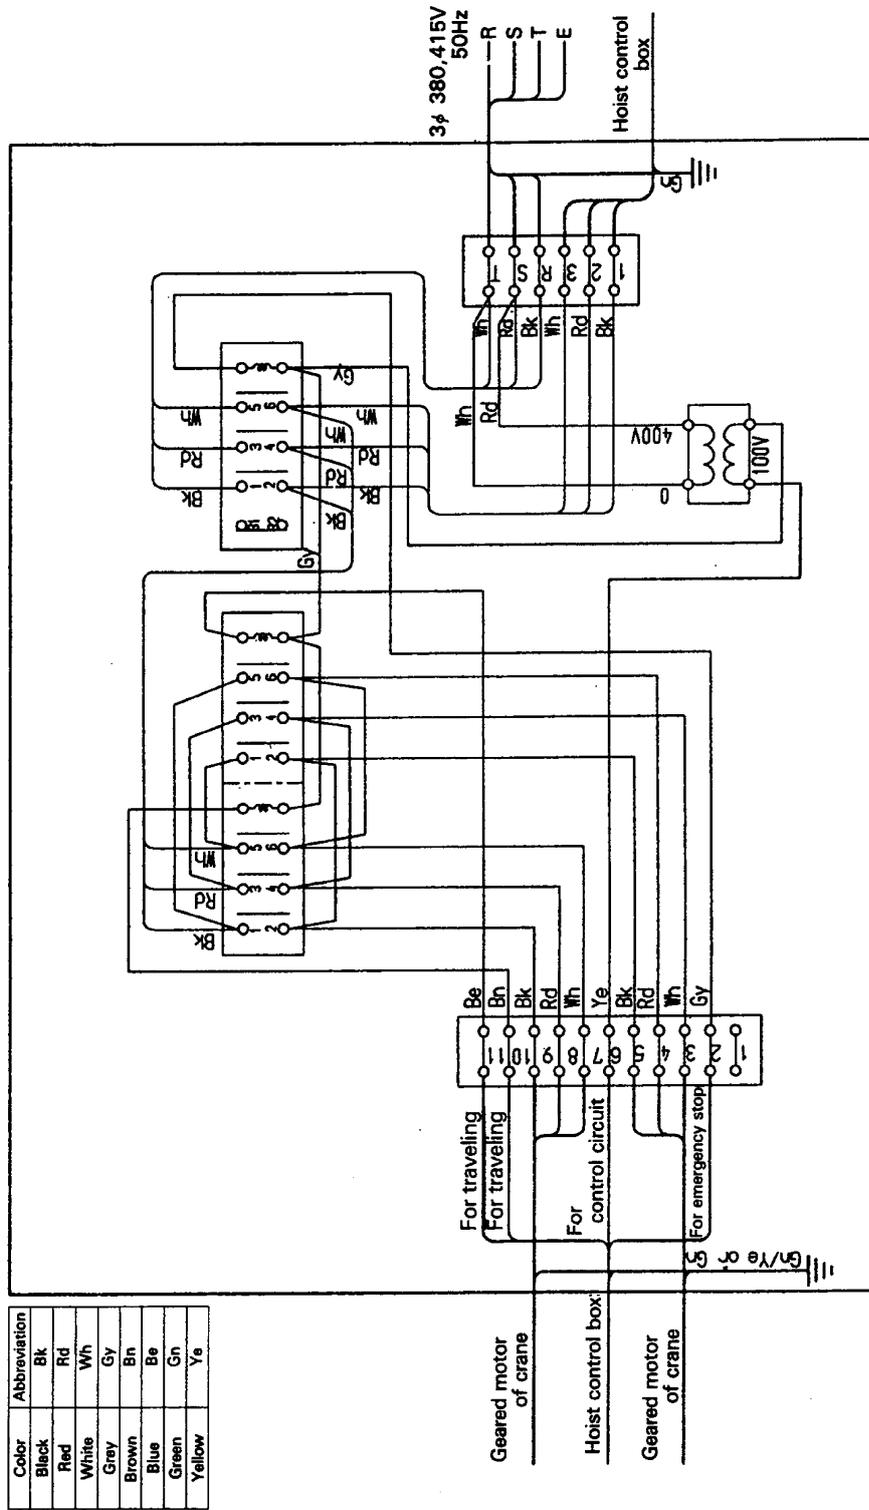

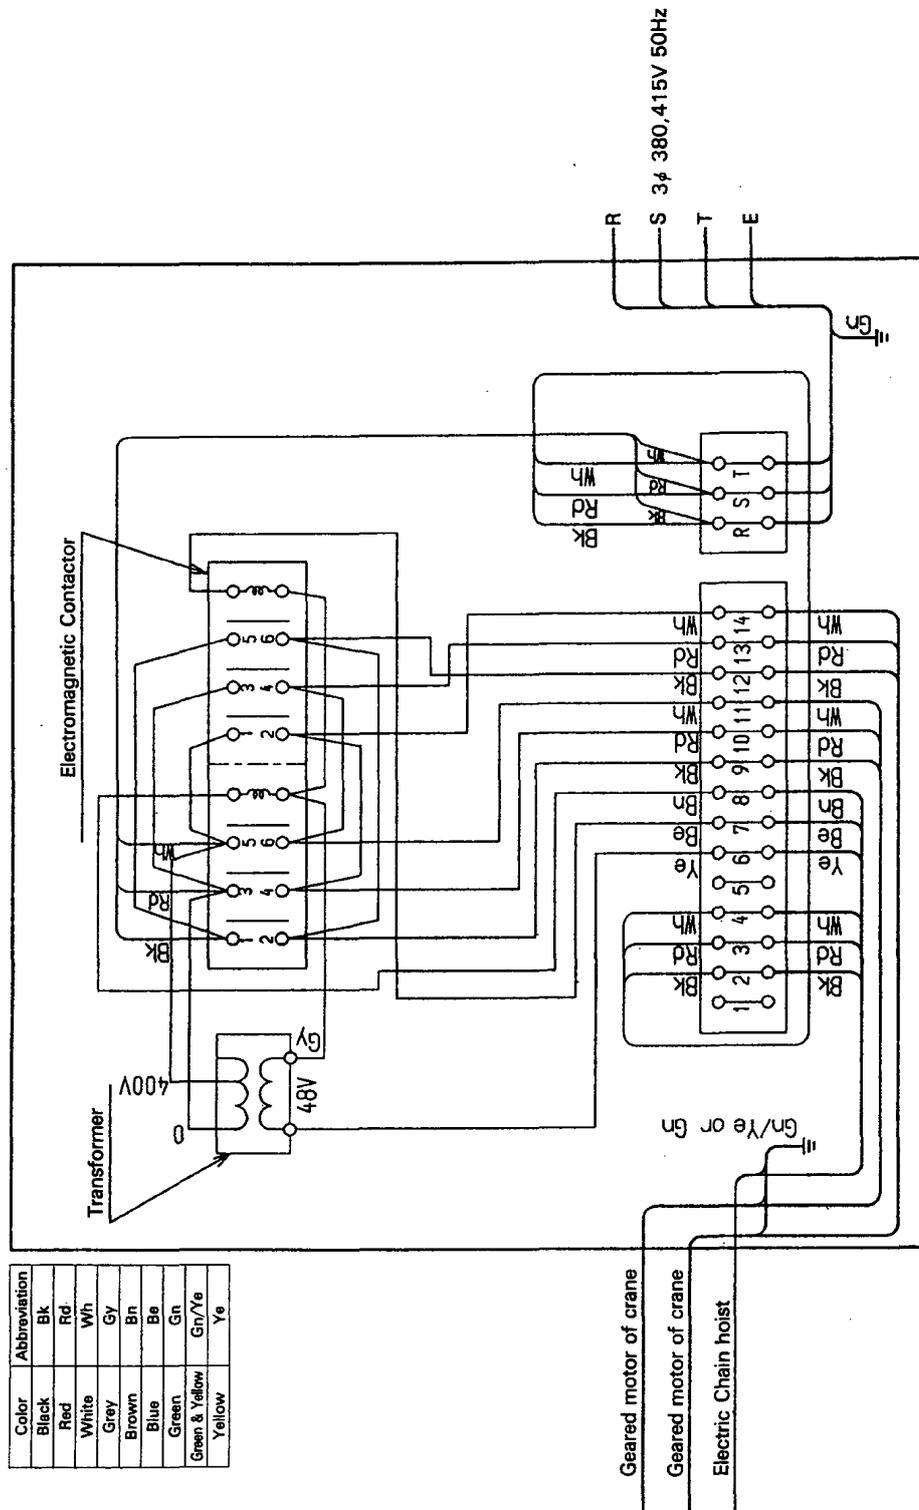

Fig. 8

5.2.1 Electric chain hoist with motorized trolley, single speed (end carriage) without emergency stop device.

Color	Abbreviation
Black	BK
Red	Rd
White	Wh
Grey	Gy
Brown	Bn
Blue	Be
Green	Gn
Green & Yellow	Gn/Ye
Yellow	Ye

*A disuse wire among three wires of the primary side of the transformer shall be isolated and rolled to be fixed securely.

Fig. 9

5.2.1 Electric chain hoist with motorized trolley, single speed (end carriage) with emergency stop device.

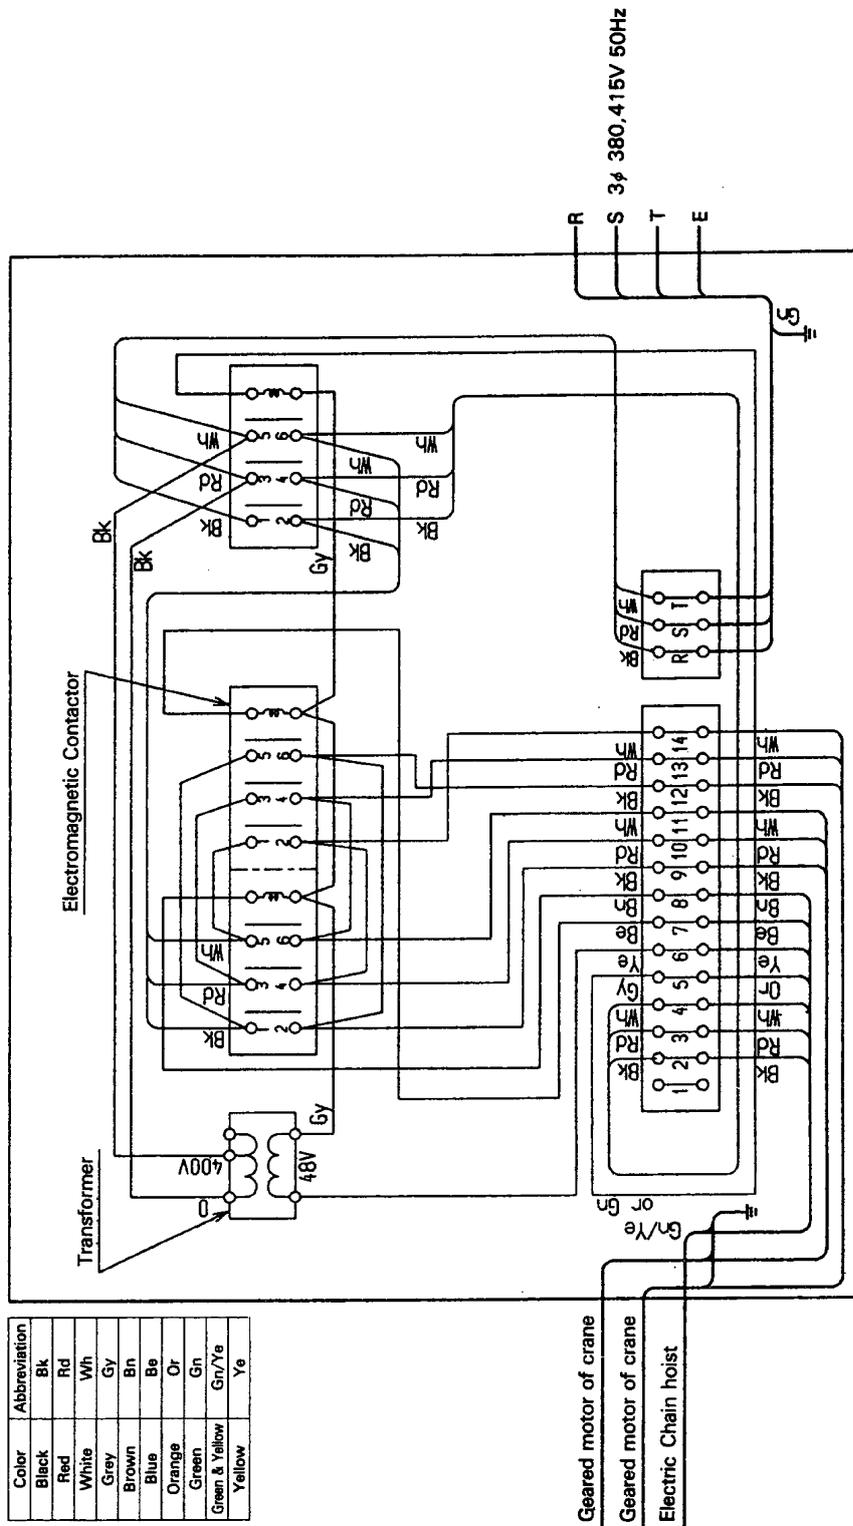

Fig. 10

5.2.1 Electric chain hoist with motorized trolley, dual speed (end carriage) with emergency stop device.

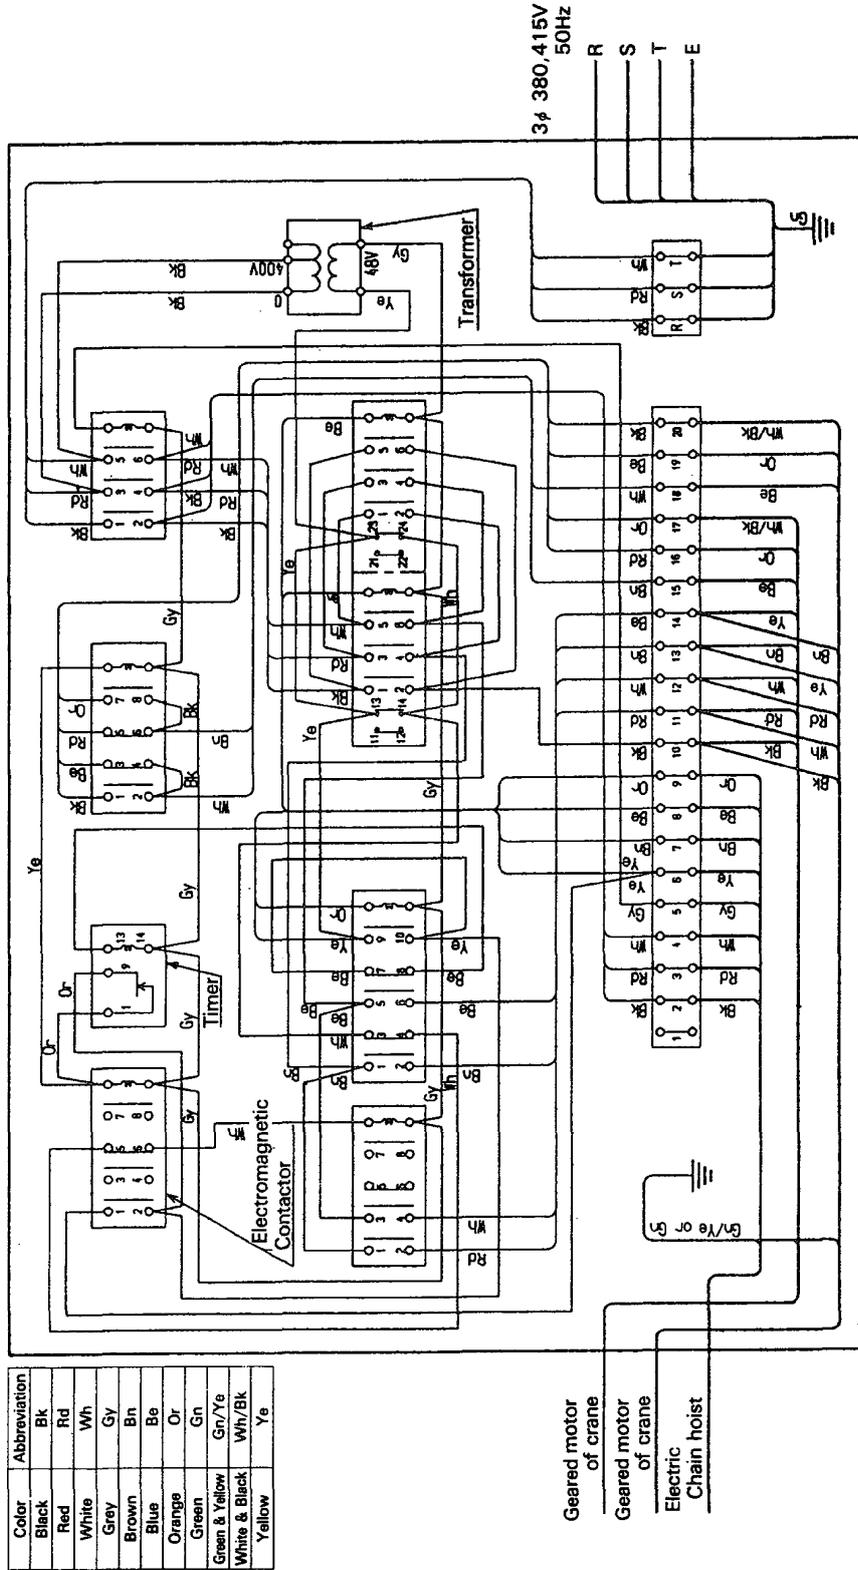

Fig. 12

5.2.2 Traverse side power supply

Though different according to span, cranes generally use a cable power supply system.

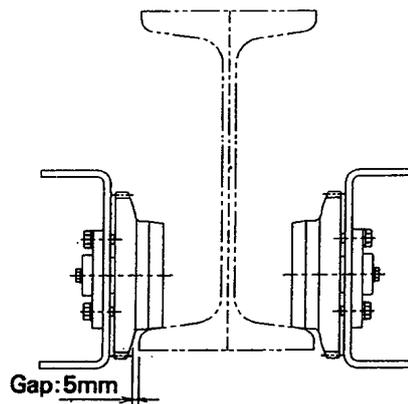

5.3 Test run

Re-check the following points after the crane has been installed.

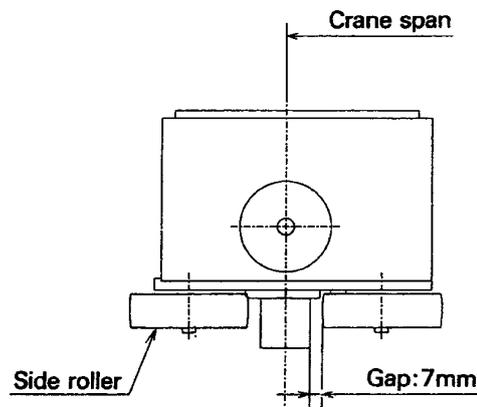

- (a) Make sure the stoppers are securely set on the girder, and that bolts are tight.
- (b) Make sure bolts coupling the end carriages to the girders are tight.
- (c) Make sure that bolts fastening the track wheel axles are tight.
- (d) Make sure the power collector moves smoothly.
- (e) Make sure the crane moves as indicated on the push button switches. Especially, make sure the left and right end carriages are not backwards.

After the above checks, check the following points to see if the crane travels properly.

- (f) Make sure no abnormal noises are made.
- (g) Make sure the crane does not travel on an incline or swerve.
- (h) Make sure the gap (approx. 5 mm) between the travel rail and track wheel flange is the same on both left and right sides.

- (i) Make sure the gap (approx. 7 mm) between the travel rail and side rollers is the same on both left and right sides.

- (j) After the above checks but before actually using the equipment, try lifting, lowering, traveling and traversing with a rated load suspended. Check the crane and parts move smoothly.

6. For better usage

There are things “to do” and “not to do”, in order to safely operate the equipment and maintain it in proper working order for many years.

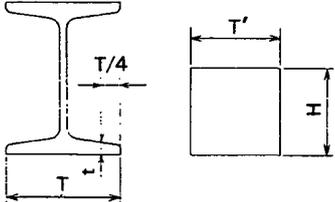

⚠ WARNING : Read carefully “Safety Instructions” for your hoist and trolley respectively provided.

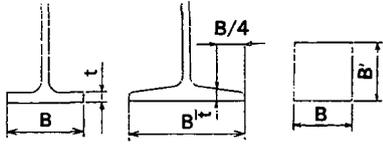

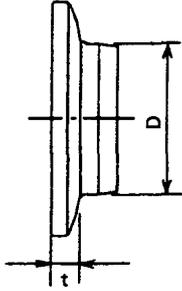

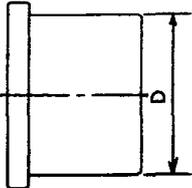

7. Maintenance and inspections

In order to safely operate the equipment and maintain it in proper working order for many years, perform daily, monthly and yearly checks on it. For your reference, sample monthly and yearly check lists are provided at the end of this manual.

7.1 Check items and criteria for judgement

Part	Check item	Inspection method	Discard limit/criteria	Remedy
Crane electric parts	1. Power supply [For cable power supply system]			
	<ul style="list-style-type: none"> • Messenger wire tautness • Cable hanger installation and mobility • Cable length 	<ul style="list-style-type: none"> • Check visually. • Check visually. • Check visually. 	<ul style="list-style-type: none"> • The wire must be sufficiently taut. • The cable must be hung at intervals but never twisted. • The cable must be longer than crane's maximum travel distance. 	<ul style="list-style-type: none"> • Tighten where necessary. • Replace hangers where necessary. • Replace cable with a longer one where necessary.
	2. Ground connection	<ul style="list-style-type: none"> • Check grounded parts. 	<ul style="list-style-type: none"> • Parts must be grounded to meet 100Ω resistance against ground. • Insulating objects like paint must not be found on the travel surfaces. 	<ul style="list-style-type: none"> • Ground parts in conformity with your local wiring regulations. • Remove any insulating objects.
3. Insulation	<ul style="list-style-type: none"> • Measure charged and non-charged parts with an insulation resistance meter. 	<ul style="list-style-type: none"> • Insulation resistance must be 0.5MΩ or more. 	<ul style="list-style-type: none"> • Investigate the cause and eliminate the trouble.

8. Track wheel disassembly and assembly

⚠ DANGER : NEVER perform disassembly and assembly works on the crane while it is supporting a load.

Off-limits to the area under the crane during the above works.

Low-head cranes come with detachable track wheel axes, in order to shorten installation and maintenance work.

8.1 Overhaul

Disassemble as described here following. Refer to Figs 13 and 14 for help.

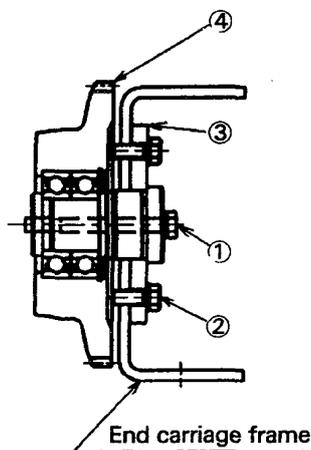

Fig. 13

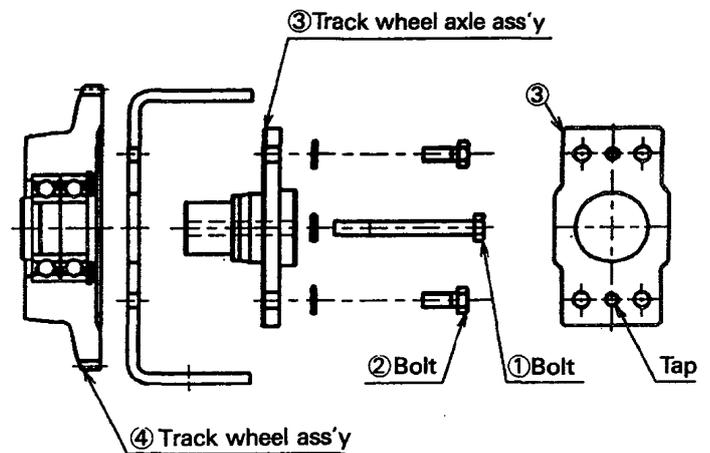

Fig. 14

Step 1 : Remove bolt ①, while holding the track wheel ④ by hand.

Step 2 : Remove bolt ②.

Step 3 : Remove the axle ass'y ③ from the end carriage frame, by screwing into the tap holes ($\times 2$) on the axle ass'y with the bolt ②.

Step 4 : Remove the track wheel ④ from the axle ass'y ③.

8.2 Assembly

After installing the crane or maintenance, reassemble the track wheels as shown in Fig. 15.

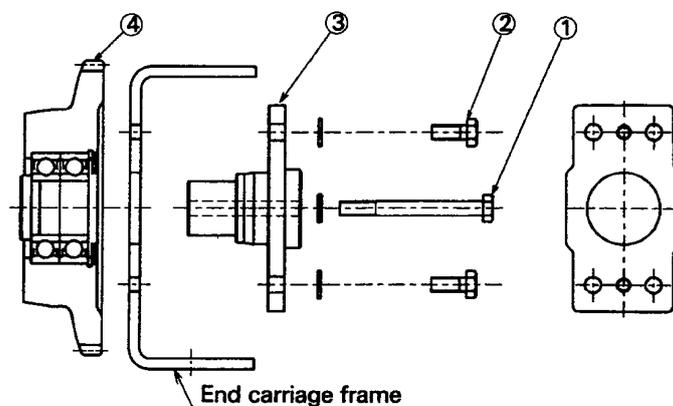

Fig. 15

Step 1: While holding the track wheel ④ by hand, pass the axle ③ through the end carriage frame and insert it inside the wheel bearing.

Step 2: While holding the track wheel ④ by hand, screw bolt ① in until both the axle ③ and wheel ④ are fixed.

When installing track wheel onto frame fasten bolt ① with a torque tabulated below.

Bolt ① size	M8	M10
Fastening Torque (kg-cm)	84 to 93	167 to 184

Step 3: Press on the axle ③ until properly in place on the end carriage frame.

Step 4: Screw bolt ② into the end carriage frame, until the axle ③ is fixed to the end carriage frame.

[After assemble check]

After assemble parts, check the following points before setting the track wheels on the travel rails.

- (a) Make sure the wheels turn freely by hand.
- (b) Make sure bolts are sufficiently tight.

9. Power supply

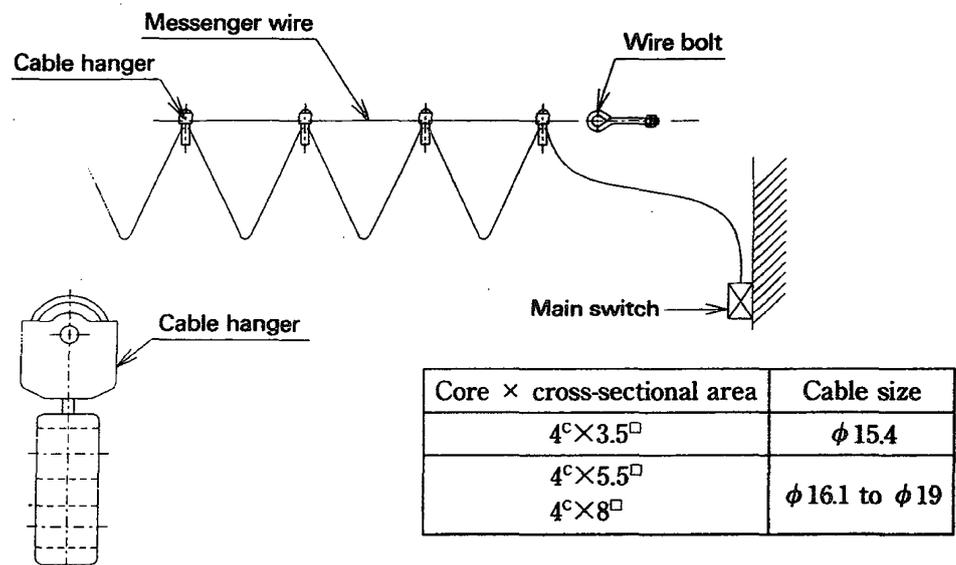

9.1 Power supply method

Power can be supplied from the source to the control box by a cable power supply, tro-reel, high tro-reel or trolley duct systems. But, for convenience sake, the simple cable power supply system is herein explained.

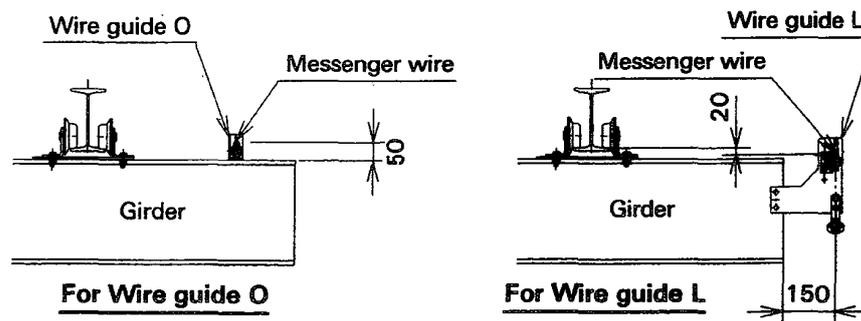

(a) Cable power supply system

This is the widest used means of supplying power to the crane because it is easy to arrange the cable.

- Use a messenger wire with a diameter between $\phi 3$ and $\phi 6$.
- Keep messenger wire length under 20m.
- Refer to the Kito Crane catalogue for allowed cable length.

String the messenger wire along the girder with either the wire guide O or wire guide L.

[For Wire guide O]

- The messenger wire can be strung along either the inside or outside of the span.

[For Wire guide L]

- The messenger wire can be strung along the outside of the span and anchored at the end of the girder.

10. Troubleshooting

Trouble	Cause	Remedy
<ul style="list-style-type: none"> • The crane does not move smoothly. 	<ul style="list-style-type: none"> • The end carriage is not set at a right angle to the girder or left and right end carriages are not parallel. • Track wheels are unevenly worn. • Due to wear in the track wheel flange, a gap has formed between the rail and wheel (rail swerves or runs on an incline). • Pressure is unbalanced between left and right brakes. • The wheel axle bolts are loose. • A gap has formed between the side rollers and travel rail (most likely due to wear in the side roller). 	<ul style="list-style-type: none"> • Set the end carriages at a right angle to the girder, and parallel with one another. • Replace the wheels where necessary. • Replace the wheels where necessary. • Adjust the left and right brakes. • Tighten bolts where necessary. • Replace the side rollers where necessary.
<ul style="list-style-type: none"> • The motor gets extremely hot. 	<ul style="list-style-type: none"> • The motor is running on a single phase current. • Voltage in the power supply has dropped. • The brake circuit is disconnected. • The rectifier is damaged. 	<ul style="list-style-type: none"> • Rewire where necessary. • Measure voltage in the power supply. • Rewire where necessary. • Replace the recitifier.
<ul style="list-style-type: none"> • Buffers on the left and right end carriages do not contact the stoppers at the same time. 	<ul style="list-style-type: none"> • The bolts coupling the end carriage to the girder are loose. 	<ul style="list-style-type: none"> • Adjust parts so that contact is made at the same time, and tighten bolts where necessary.
<ul style="list-style-type: none"> • Electrical shock 	<ul style="list-style-type: none"> • The travel rail is not properly grounded. • The travel surface on the girder is coated with paint. • Water or foreign matter has penetrated the electric parts. 	<ul style="list-style-type: none"> • Ground parts where necessary. • Remove paint from girder surface. • Dry parts and remove any foreign matter where necessary.

11. WARRANTY

KITO Corporation ("KITO") extends the following warranty to the original purchaser ("Purchaser") of new products manufactured by "KITO" (KITO's Products).

- (1) "KITO" warrants that KITO's Products, when shipped, shall be free from defects in workmanship and/or materials under normal use and service and "KITO" shall, at the election of "KITO", repair or replace free of charge any parts or items which are proven to have said defects, provided that all claims for defects under this warranty shall be made in writing immediately upon discovery and, in any event, within one (1) year from the date of purchase of KITO's Products by "Purchaser" and provided, further, that defective parts or items shall be kept for examination by "KITO" or its authorized agents or returned to KITO's factory or authorized service center upon request by "KITO".
- (2) "KITO" does not warrant components of products provided by other manufacturers. However to the extent possible, "KITO" will assign to "Purchaser" applicable warranties of such other manufacturers.
- (3) Except for the repair or replacement mentioned in (1) above which is "KITO"'s sole liability and purchaser's exclusive remedy under this warranty, "KITO" shall not be responsible for any other claims arising out of the purchase and use of KITO's Products, regardless of whether "Purchaser"'s claims are based on breach of contract, tort or other theories, including claims for any damages whether direct, indirect, incidental or consequential.
- (4) This warranty is conditional upon the installation, maintenance and use of KITO's Products pursuant to the product manuals prepared in accordance with content instructions by "KITO". This warranty shall not apply to KITO's Products which have been subject to negligence, misuse, abuse, misapplication or any improper use or combination or improper fittings, alignment or maintenance.
- (5) "KITO" shall not be responsible for any loss or damage caused by transportation, prolonged or improper storage or normal wear and tear of KITO's Products or for loss of operating time.
- (6) This warranty shall not apply to KITO's Products which have been fitted with or repaired with parts components or items not supplied or approved by "KITO" or which have been modified or altered.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE.

12 Parts list The following is a parts list for your endcarriage.

Motorized Overhead End Carriage

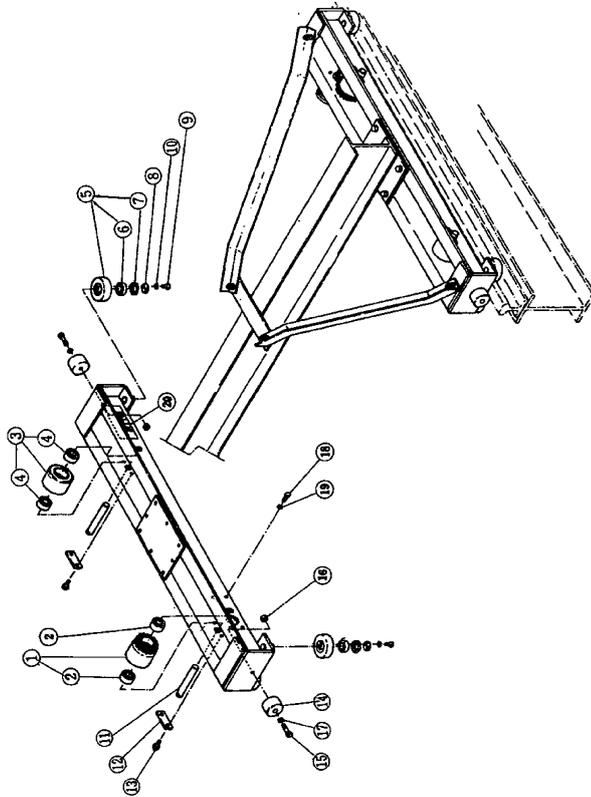

Fig. No.	Parts No.	Parts name	Type		E0010-12	E0010-18	E0020-12	E0020-18	Note

20	G1JE-512	Brake disk	2				(6204-2RU)		
21	G1JE-513	Armature	2						
22	G1JE-514	Snap ring	2			(S-20)			
23	G1JE-515	Socket bolt	8			(M8x22x22)			For motor auto/brake disk side
24	G1JE-5610	Electromagnetic coil assembly	2						
25	G1JE-602	Rectifier	2						
26	G1JE-603	Adjusting bolt	2						For brake adjustment
27	G1JE-604	Lock nut	2						For brake adjustment
28	G1JE-605	Spring holder	2						
29	G1JE-606	Brake spring	2						
30	G1JE-607	Socket bolt with spring washer	6			(M6x20x20)			For electromagnetic coil
31	G1JE-609	Brake bracket	2						
32	G1JE-611	Socket bolt with spring washer	8			(M6x20x20)			For brake bracket
33	G1JE-616	Spring pin	4						For electromagnetic coil
34	G1JE-701	Terminal cover	2						
35	G1JE-703	Cable holder	2						
36	G1JE-704S	Cable packing 14	2						
37	G1JE-704B	Cable packing 18	2						
	G1JE-705	Round head screw	6 (10)			(M4x10)			For terminal cover for SD
38	G1JE-708	Spring washer	10 (10)			(2-M4)			For terminal cover for SD
39	G1JE-709	Nut	10 (10)			(2-M4)			For terminal cover for SD
40	G1JE-707	Terminal cover packing	2						
41	G1JE-710	Round head screw	16			(M4x10)			For terminal cover, cable holder, ground
42	G1CE-702S	Name plate TS	2						
	G1CE-702L	Name plate TS	2						
	G1CE-702B	Name plate TS	2						
43	G1CE-702H	Name plate TS	2						

Sample check lists (monthly and yearly inspection)

Model No.	Manufacturing No.	Date installed	Inspection No.
Location	Type of crane	Rated load	Crane manufacturing No.
			Inspection valid until

Check list		Date checked	
Hoist	Outer appearance		
	Abnormal noise		
	Gear oil		
	Top pin		
	Plug-socket connection		
	Name plate		
	Performance test		
	Wiring		
	Performance		
	Limit lever/Lever pin coupling		
Limit switches	Cross guide movement		
	Stopper		
Load chain/Wire rope	Performance test		
	Outer appearance		
Accessories	Abnormal noises		
	Wear		
	Suspender/Bottom yoke		
	Idle sheave		
	Chain spring		
	Hook shape/dimension		
	Hook movement		
	Hook latch		
	Chain container		
	Idle sheave		
Push button switches	Operation test		
	Wiring		
Traverser	Name plate		
	Traverse test		
	Motor reduction gear-to-frame installation		
	Wheel surface/Teeth wear		
	Snap ring for fixing wheels		
	Frame deformation		

○ : Good △ : Replace or adjust next time. ✕ : Requires replacement or adjustment immediately.

Check list		Date checked	
Traverser	Suspension shaft/Boots		
	Side rollers		
Electric trolley	Hand wheel/Hand chain		
	Suspender		
Electric parts	Control box		
	Contact/Transformer		
Travel rails	Outer appearance		
	Wear in travel surface		
	Grounding*		
Girders	Name plate		
	Wear		
End carriage	Stoppers		
	Wear in wheel travel surface		
	Snap ring for fixing wheels		
	Frame deformation		
	Side rollers		
Drive mechanism	Buffers		
	Grease		
	Motor brake		
	Soft run		
Collector arm	Hand wheel/Hand chain		
	Messenger wire tautness		
	Cable hangers		
	T-shaped hangers		
	Cable		
	Plug-socket connection		
	Fuse capacity*		
	Grounding*		
	Incoming power supply voltage*		
	Insulation resistance		
Checked by	Load test		
	Supervised by		

*Check yearly.
